## WHO WE ARE

---

We are Helios Prime – An early adoption enterprise that focuses on growing sectors in industries related but not limited to: Defi and blockchain technology, synthetic commodities, travel, and the medical field. As we grow other ventures will be considered.

We use a combination of fundamental analysis and technical analysis to decide which assets we put in our fund and to determine market cycle stages.

Our initial roll out will comprise of emerging blockchains that are established by criteria of our current in-house standard that mainly focuses on optimized technology benefitting the end user experience and the new ecosystem as a whole.

We also take into account any partnerships with other projects from different sectors that might add a heavier weight when deciding on assets to include in certain sets that we provide.

### What makes us different

Unlike most competitors in the field Helios Prime takes a different approach.

Though we may be small – we are not greedy. We have decided to reduce our managers streaming fees by (1%) for every \$100K in Market cap or Total value per index with a bottom out at (0.84%). This Fee will never be increased for the life of the index.

We aim to focus on emerging sectors and take advantage of new projects with vetted strong financial backing, efficient team leaders and project managers; all with proven track records.

The strategies we take are determined on what each index is attempting to provide based on the name of the index and any short term goals necessary to provide a sustained long term structure for said index.

## WHY ARE WE HERE

---

**Time Efficiency:** Eliminating the need to spend hours of researching, locating each asset, and watching for market fluctuations.

**Cost Efficiency:** Eliminating the need to perform countless costly transactions.

**Dilution Proof:** The actual index token needs all underlying assets to be minted into circulation.

**Performance Incentives:** Air drops, yield farming, liquidity mining and streaming fees that are hard coded into the smart contracts that these portfolios are created on encourages us at Helios Prime to perform at our highest level so all may benefit.

- Platform Based Options: "Set" protocol will serve as one avenue that will provide our indexes.
- Uniswap: We know gas is high. We have decided we will kick start the Uniswap Liquidity Pool with our EDP token. Only a limited amount will be created in the pool to help mitigate gas fees to purchase our token. Our index is freely available for direct purchase on the native TokenSet Site at any amount.
- Platform Based Options: Synthetix (SNX) Protocol will also be utilized for any index that will control synthetic commodities, equities, plus other sorts of assets deemed to fit the criteria or scope.
- Platform Based Options: Future Protocols on emerging blockchains to benefit from efficient transaction fees, emerging technology companies within the new ecosystem, and of course user experience.

## WHAT WE CURRENTLY OFFER

---

### Initial Roll out

**Helios Prime – Eco Defi Plus:** The index aims to be structured to focus on: (order of importance) Ecosystem tokens, defi tokens, and plus (plus is based on in-house criteria). Please see our site for all updated info regarding each index with details of each underlying token.

Helios Prime – Energy & Metals : This index will focus on mainly commodities offered on the synthetix platform. It will determine the market stages at any given time and will combine long term metals analysis and downside % history among other synthetics to correlate a synergistic organic long term growth while still being diversified. Check our site for more info.

## WHAT'S NEXT

Helios Prime – Road Map

Travel Index –Platform TBD

Medical Index – Platform TBD

Insurance index – Platform TBD

### *Criteria for token inclusion*

We have outlined our specific standards for each section of the determination process on our site.

#### **Sections include but not limited to:**

Token's supply characteristics

Token's descriptive characteristics

Project's traction characteristics

Protocol's user safety characteristics

### *Index Maintenance*

(Summary of process)

When: Dependent on a combination of - Gas fees / platform / Market cycle stage / Necessity.

Interval (if necessary): Minimum 2 trades a month on any index holdings. Maximum 10 trades (includes simple rebalance).

How: A Determination phase based on a set of criteria for each index.

What: Additions or deletion along with rebalancing of certain assets inside each index.

## PARTNERS AND TEAM BACKGROUND

---

### The Team

Helios Prime is comprised of team members that are familiar with the type of projects that we as a team are aiming to include to benefit each index in itself and so each token inside has a correlation to each other in some fashion.

We have travel, medical, defi, and new ecosystem team member experience to help make sure the flow of all our projects benefit one another in many ways for the goal of a synergistic relation between all.

### *Partnership support and collaborations*

Please view our medium posts for any updated partnerships.
